

## In-Class Assignment Week02

Write a Fortran program to print the odd integers between 0 and m ( $0 < m < 1000$ ), and compute and print the sum value at the end. Your program should take the required information via keyboard. By running the program the following questions and results should be seen on the screen.

This program prints all odd numbers between 0 to maximum 1000. And calculates the sum of them.

Please enter your name (use maximum 65 letters)

Name\_of\_the\_user

Please enter your desire integers number ( your number should be between 0 to 1000)

??

The odd numbers between 0 to ?? are:

- 
- 

The sum of these odd numbers is: XXX

Thank you Name\_of\_the\_user for using this code.
